

# Energy Performance Certificate (EPC)

188 Lochfield Road, Paisley, PA2 7QX

**Dwelling type:** Ground-floor flat  
**Date of assessment:** 06 February 2015  
**Date of certificate:** 06 February 2015  
**Total floor area:** 54 m<sup>2</sup>

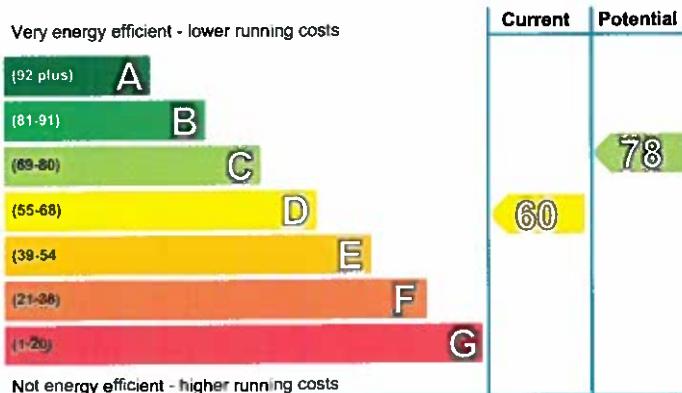

**Reference number:** 0130-2766-3020-9305-2325  
**Type of assessment:** RdSAP, existing dwelling  
**Primary Energy Indicator:** 353 kWh/m<sup>2</sup>/year  
**Main heating and fuel:** Boiler and radiators, mains gas

## You can use this document to:

- Compare current ratings of properties to see which are more energy efficient and environmentally friendly
- Find out how to save energy and money and also reduce CO<sub>2</sub> emissions by improving your home

Estimated energy costs for your home for 3 years*	£2,292	See your recommendations report for more information
Over 3 years you could save*	£1,068	

\* based upon the cost of energy for heating, hot water, lighting and ventilation, calculated using standard assumptions

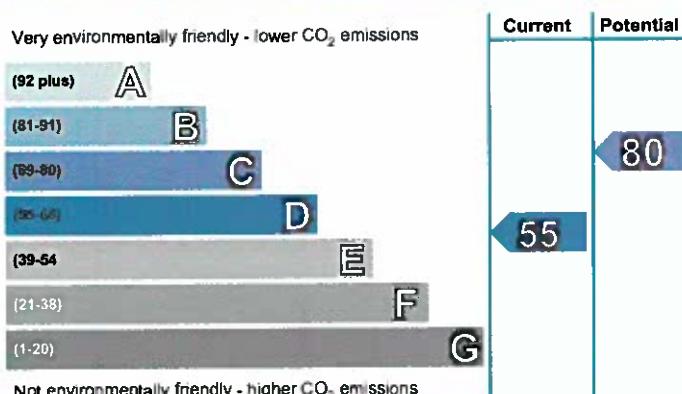

## Energy Efficiency Rating

This graph shows the current efficiency of your home, taking into account both energy efficiency and fuel costs. The higher this rating, the lower your fuel bills are likely to be.

Based on calculated energy use of 353 kWh/m<sup>2</sup>/yr, your current rating is band D (60). The average rating for a home in Scotland is band D (61).

The potential rating shows the effect of undertaking all of the improvement measures listed within your recommendations report.

## Environmental Impact (CO<sub>2</sub>) Rating

This graph shows the effect of your home on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions. The higher the rating, the less impact it has on the environment.

Based on calculated emissions of 3 kg CO<sub>2</sub>/m<sup>2</sup>/yr, your current rating is band D (55). The average rating for a home in Scotland is band D (59).

The potential rating shows the effect of undertaking all of the improvement measures listed within your recommendations report.

## Top actions you can take to save money and make your home more efficient

Recommended measures	Indicative cost	Typical savings over 3 years	Available with Green Deal
1 Internal or external wall insulation	£4,000 - £14,000	£663	✓
2 Floor insulation (suspended floor)	£800 - £1,200	£225	✓
3 Low energy lighting	£25	£93	

A full list of recommended improvement measures for your home, together with more information on potential cost and savings and advice to help you carry out improvements can be found in your recommendations report.

The Green Deal may allow you to make your home warmer and cheaper to run at no up-front capital cost. See your recommendations report for more details.

THIS PAGE IS THE ENERGY PERFORMANCE CERTIFICATE WHICH MUST BE AFFIXED TO THE DWELLING AND NOT BE REMOVED UNLESS IT IS REPLACED WITH AN UPDATED CERTIFICATE

The average Scottish household produces about 6 tonnes of carbon dioxide every year. Based on this assessment, heating and lighting this home currently produces approximately 3.3 tonnes of carbon dioxide every year. Adopting recommendations in this report can reduce emissions by 1.8 tonnes per year. You could reduce emissions even more by switching to renewable energy sources.

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in our homes produces over a quarter of the UK's carbon dioxide emissions. Different fuels produce different amounts of carbon dioxide for every kWh of energy used. The Environmental Impact Rating of your home is calculated by applying these factors, for the fuels you use to your overall energy use.

As we all use our homes in different ways, the energy rating is calculated using standard occupancy assumptions between buildings in different parts of Scotland. However, to make information more relevant to your home, local which may be different from the way you use it. The rating also uses national weather information to allow comparison with other data is used to calculate your energy use. CO<sub>2</sub> emissions, running costs and the savings possible from making improvements.

Your Energy Efficiency Rating is calculated using the standard UK methodology, RDSAP. This calculates energy used for heating, hot water, lighting and ventilation and then applies fuel costs to that energy use to give an overall rating for your home. The rating is given on a scale of 1 to 100. Other than the cost of fuel for electrical appliances and for cooking, a building with a rating of 100 would cost almost nothing to run.

## The impact of your home on the environment

Each element sets out the results of the survey which lists the current energy-related features of this home is assessed by the national calculation methodology. 1 star = very poor (least efficient), 2 stars = poor, 3 stars = average, 4 stars = good and 5 stars = very good (most efficient). The assessment does not take into consideration the condition of an element and how well it is working. Assumed means that the insulation could not be inspected and an assumption has been made in the methodology, based on age and type of construction.

This table sets out the results of the survey which lists the current energy-related features of this home. Each element is assessed by the national calculation methodology. 1 star = very poor (least efficient), 2 stars = poor, 3 stars = average, 4 stars = good and 5 stars = very good (most efficient). The assessment does not take into consideration the condition of an element and how well it is working. Assumed means that the insulation could not be inspected and an assumption has been made in the methodology, based on age and type of construction.

## The energy efficiency rating of your home

Element	Description	Energy Efficiency	Environmental
Walls	Solid brick, as built, no insulation (assumed)	★★★★★	★★★★★
Roof	(another dwelling above)	—	—
Floor	Suspended, no insulation (assumed)	—	—
Windows	Fully double glazed	★★★★★	★★★★★
Main heating	Boiler and radiators, mains gas	★★★★★	★★★★★
Main heating controls	Programmer, TRVs and bypass	★★★★★	★★★★★
Secondary heating	Room heaters, electric	—	—
Hot water	From main system	★★★★★	★★★★★
Lighting	No low energy lighting	★★★★★	★★★★★

This table sets out the results of the survey which lists the current energy-related features of this home is assessed by the national calculation methodology. 1 star = very poor (least efficient), 2 stars = poor, 3 stars = average, 4 stars = good and 5 stars = very good (most efficient). The assessment does not take into consideration the condition of an element and how well it is working. Assumed means that the insulation could not be inspected and an assumption has been made in the methodology, based on age and type of construction.

## Summary of the energy performance related features of this home

### Recommendations Report

188 Lochfield Road, Paisley, PA2 7QX  
06 February 2015 RRN: 0130-2766-3020-9305-2325

## Estimated energy costs for this home

	Current energy costs	Potential energy costs	Potential future savings
Heating	£1,848 over 3 years	£894 over 3 years	
Hot water	£219 over 3 years	£219 over 3 years	
Lighting	£225 over 3 years	£111 over 3 years	
<b>Totals</b>	<b>£2,292</b>	<b>£1,224</b>	 You could save £1,068 over 3 years

These figures show how much the average household would spend in this property for heating, lighting and hot water. This excludes energy use for running appliances such as TVs, computers and cookers, and the benefits of any electricity generated by this home (for example, from photovoltaic panels). The potential savings in energy costs show the effect of undertaking all of the recommended measures listed below.

## Recommendations for improvement

The measures below will improve the energy and environmental performance of this dwelling. The performance ratings after improvements listed below are cumulative; that is, they assume the improvements have been installed in the order that they appear in the table. Further information about the recommended measures and other simple actions to take today to save money is available from the Home Energy Scotland hotline which can be contacted on 0808 808 2282. Before carrying out work, make sure that the appropriate permissions are obtained, where necessary. This may include permission from a landlord (if you are a tenant) or the need to get a Building Warrant for certain types of work.

Recommended measures	Indicative cost	Typical saving per year	Rating after improvement		Green Deal
			Energy	Environment	
1 Internal or external wall insulation	£4,000 - £14,000	£221	C 71	C 71	
2 Floor insulation (suspended floor)	£800 - £1,200	£75	C 75	C 77	
3 Low energy lighting for all fixed outlets	£25	£31	C 77	C 78	
4 Replacement glazing units	£1,000 - £1,400	£29	C 78	C 80	

Measures which have a green deal tick are likely to be eligible for Green Deal finance plans based on indicative costs. Subsidy also may be available for some measures, such as solid wall insulation. Additional support may also be available for certain households in receipt of means tested benefits. Measures which have an orange tick may need additional finance. To find out how you could use Green Deal finance to improve your property, visit [www.greenerscotland.org](http://www.greenerscotland.org) or contact the Home Energy Scotland hotline on 0808 808 2282.

## Choosing the right improvement package

For free and impartial advice on choosing suitable measures for your property, contact the Home Energy Scotland hotline on 0808 808 2282 or go to [www.greenerscotland.org](http://www.greenerscotland.org).

**energy**  
**saving**  
**trust**

Heat demand	Existing dwelling	Impact of lot	Impact of cavity insulation	wall insulation	Space heating (kWh per year)	Water heating (kWh per year)
1,543	9,128	N/A	N/A	(4,229)		

You could receive renewable heat incentive (RHI) payments and help reduce carbon emissions by replacing your existing heating system with one that generates renewable heat and, where appropriate, having your loft insulated and cavity walls filled. The estimated energy required for space and water heating will form the basis of the payments. For more information go to [www.energy savers trust.org.uk/scotland/thi](http://www.energy savers trust.org.uk/scotland/thi).

Your home's heat demand

L2C energy sources present: There are none provided for this home

Low and zero carbon (LZC) energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting

Low and zero carbon energy sources

Replacing existing double-glazed units with new high-performance units. Building regulations require that repalcement glazing is to a standard no worse than previous and a building warrant is not required. Planning permission might be required for such work if a building is listed or within a conservation area so it is best to check with your local authority.

**3 Low energy lighting**  
Replacing standard light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of domestic fittings.

In insulation of a floor will significantly reduce heat loss; this will improve levels of comfort, reduce energy use and lower fuel bills. Suspended floors can often be insulated from below but must have adequate ventilation to prevent dampness; seek advice about this if unsure. Further information about floor insulation is available from many sources including [www.energysavvytrust.org.uk/scotland/insulation/Floor-insulation](http://www.energysavvytrust.org.uk/scotland/insulation/Floor-insulation). Building regulations generally apply to this work so it is best to check this with your local authority building standards department.

1. **External or external wall insulation**  
External or external wall insulation involves adding a layer of insulation to either the inside or the outside surface of the external walls, which reduces heat loss and lowers fuel bills. As it is more expensive than cavity wall insulation it is only recommended for walls without a cavity, or where a layer of insulation is fixed to the inside surface of filled internal insulation, known as dry-lining, is where a cavity or technical reasons a cavity cannot be filled. Internal insulation, is best applied when rooms require redecorating. External solid wall insulation is the application of an insulant and a weather-protective finish to the outside of the wall. This may improve the look of the home, particularly where existing brickwork or rendering is poor, and will provide lasting weather protection. Further information can be obtained from the National Insulation Association ([www.nationalinsulationassociation.org.uk](http://www.nationalinsulationassociation.org.uk)). It should be noted that planning permission might be required and that building regulations apply to this work so it is best to check with your local authority whether a building warrant of planning permission will be required.

This section offers additional information and advice on the recommended improvement measures for your home.

About the recommended measures to improve your home's performance rating

Recommendations Report

## About this document

This Recommendations Report and the accompanying Energy Performance Certificate are valid for a maximum of ten years. These documents cease to be valid where superseded by a more recent assessment of the same building carried out by a member of an Approved Organisation.

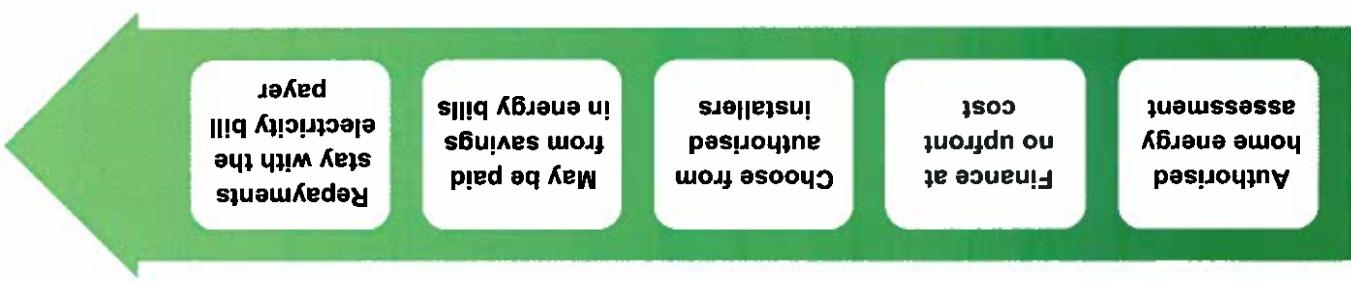

The Energy Performance Certificate and this Recommendations Report for this building were produced following an energy assessment undertaken by an assessor accredited by Elmhurst ([www.elmhurstenergy.co.uk](http://www.elmhurstenergy.co.uk)), an Approved Organisation Appointed by Scottish Ministers. The certificate has been produced under the Energy Performance of Buildings (Scotland) Regulations 2008 from data lodged to the Scottish EPC register. You can verify the validity of this document by visiting [www.scottishepcregister.org.uk](http://www.scottishepcregister.org.uk) and entering the report reference number (RRN) printed at the top of this page.

Assessor's name: Mr. Brian Douglas  
Assessor membership number: EES/009513  
Company name/trading name: Connells Survey & Valuation  
Address: 8A Frank Foley Way  
Stafford  
ST16 2ST  
Phone number: 01525 218500  
Email address: [brian.douglas@connells.co.uk](mailto:brian.douglas@connells.co.uk)  
Related party disclosure: No related party

If you have any concerns regarding the content of this report or the service provided by your assessor you should in the first instance raise these matters with your assessor and with the Approved Organisation to which they belong. All Approved Organisations are required to publish their complaints and disciplinary procedures and details can be found online at the web address given above.

## Use of this energy performance information

This Certificate and Recommendations Report will be available to view online by any party with access to the report reference number (RRN) and to organisations delivering energy efficiency and carbon reduction initiatives on behalf of the Scottish and UK Governments. If you are the current owner or occupier of this building and do not wish this data to be used by these organisations to contact you in relation to such initiatives, please opt out by visiting [www.scottishepcregister.org.uk](http://www.scottishepcregister.org.uk) and your data will be restricted accordingly. Further information on this and on Energy Performance Certificates in general can be found at [www.scotland.gov.uk/epc](http://www.scotland.gov.uk/epc).

To find out more, visit [www.greenerscotland.org](http://www.greenerscotland.org) or call 0808 808 2282.

For households in receipt of income-related benefits, additional help may be available.

To see which improvements are recommended for this property, please turn to page 3. You can choose which improvement you want to install and ask for a quote from an authorised Green Deal installer. If you move home, the responsibility for paying the Green Deal installation by an authorised Green Deal installer. If you move home, they will organise charge under the credit agreement passes to the new electricity bill payer.

Under a Green Deal, the cost of the improvements is repaid over time via a credit agreement. Repayments are made through a charge added to the electricity bill for the property.

## Opportunity to benefit from a Green Deal on this property
